

HAND OPERATED HYDRAULIC PRESSES

The sturdy construction of all presses gurantees stability and durability. The Press is provided within a 2 stage hand pump. The low pressure pump is used for rapid advance of piston at low pressure. The high pressure pump is provided with a special material lining and is used for slow advance at high pressure. The winch provided for raising and lowering the table is smooth running. During operation the table is fastened by means of pins.. The press has been all welded standard accessories and planned off V Block for straightening.

Model No.	Pressure in Tons	Between Column Length x Breadth		Between Ram to Bed		Travel of Ram
		mm	mm	Min.	Max.	
SHHP1	5	600	175	125	750	125
SHHP2	10	625	200	150	750	140
